

EXPERIENCE WITH TESTING ACCORDING TO EUROPEAN STANDARDS

Jan Capek, Marek Štorkán

VÚKV a.s.

capek@vukv.cz, storkan@vukv.cz

Keywords: Rail vehicle, testing, safety, dynamics

Summary: Every new type of vehicle must be tested in the EU according to European standards for homologation. VÚKV has many years of experience in type testing of all types of railway vehicles: EMUs, locomotives, freight wagons and trams. New test procedures and unique test equipment are developed in-house by the staff of experienced engineers who participate in the tests. Insight into the tests will be shared with some practical tips, focusing on the essential tests dealing with safety against derailment and running dynamics.
